Multiplication Challenge

Material:

Game board

➤ 25 bingo counters (2 different colours)

> 2 dice (10 sided)

Virtual 10 sided die: http://www.bgfl.org/bgfl/custom/resources_ftp/client_ftp/ks1/maths/dice/ten.htm

Players: 2-4 players

Game rules:

Each player in turn throws the dice to obtain a product. The player says the number sentence out loud (6 x 3/six groups of 3) and places a counter on the corresponding number. Once a counter is placed on a number, the opponent can no longer play that number. If the player cannot place a counter, the player looses a turn. The player who places the most counters on the game board wins.

Note to parents:

This game allows for a variety of multiplication strategies to find the product. Your child can create equal groups, use repeated addition or an open number line to obtain the product. Your child is encouraged to verbalize the strategy he/she used to find the product.

Multiplication Challenge

1	2	3	4	5	6	7	8	9	10
11	12	13	14	15	16	17	18	19	20
21	22	23	24	25	26	27	28	29	30
